We at IceTheme will continue to deliver you the most stunning and functional templates, while in the same time we will maintain the accessibility and usability on the highest level. To make our template more more sophisticated we have build some modules which can be added to our templates. Below is the list with all our modules. Each module is described and there are screenshot for then so that you can know the marvelous features and make use of them.

If you need help with this our modules please take the time to write on our [Forum](#) on the IceTheme website

IceAccordion

IceAccordion is a simple yet powerful module based on the popular Mootools library. It can display a set of article in an accordion way.It should be used when the vertical space is limited and you have a large number of articles.
